

Telecommunications operator

Telecommunications services for business

Phone services

Local, long-distance and international telephony

High-speed Internet access

Solutions related to FOL and service links of the national service provider

Corporate networks

IP VPN - reliable corporate networks of data transmission on the base of IP/MPLS

SCS designing and installation

Construction of local networks in the client's building

Service of business-centers

Full range of telecommunications services for business center

Supply of software and hardware

Production of the world's software, IT-equipment and information security industry

About Company

UTeL.KZ LLP is a dynamically developing company that has been rendering a wide range of modern telecommunication and IT services for business since 2008 with optimum services' quality-to-price ratio in the territory of the RK.

Statutory License:

- Local telephony АБА No 002034 dated December 23, 2008;
- IP-telephony (Internet-telephony) АБА No 002046 dated December 23, 2008;
- Data transmission (including Internet and telegraph services) АБА No 002039 dated December 23, 2008.

Certificates:

- СТ РК ИСО 9001-2009 (ISO 9001:2008). Quality Management System;
- СТ РК ИСО 14001-2006 (ISO 14001:2004). Environmental Management System;
- СТ РК ОHSAS 18001-2008 (OHSAS 18001:2007). Occupational health and safety management system.

An individual approach and overall solution of a client's tasks contributed to current success of UTeL.KZ Company. Herewith, UTeL.KZ gives consideration to services' reliability and quality as one of the most important conditions for successful activities using high-speed ground communications links and advanced telecommunication equipment of the leading global producers.

Telephony

UTeL.KZ provides for the best quality of voice communications due to connection to telephone network using TDM technology. Thus, adequate telephony with identification of a subscriber's city number and extension dialing function is arranged. Therefore, the service cost-efficiently differs from those IP-telephony solutions when connection to traditional service providers is performed beyond the RK.

UTeL.KZ offers the most advanced and money-saving type of telephony: using SIP Protocol.

When arranging telephony for the clients, UTeL.KZ provides full range of services, including designing and installation of the local networks (computer and telephone networks), supply and setting-up of required equipment, including Private Branch Exchange, telephone sets, equipment for computer network.

Major advantages:

- Competitive rates for long-distance and international telephony;
- Scalability;
- Ease of use and mobility.

Internet access

UTeL.KZ Company has been delivering the data transmission and Internet access channels on advantageous terms directly from such leading communications service providers as Kazakhtelecom JSC and Transtelecom JSC that provides for maximum reliability and quality of ground links and ability of reservation at independent trunk networks. Competitive tariffs and high speed make it possible to simplify in a company the issue of Internet-resources access control and qualified engineering staff of UTeL.KZ is able to switch in unnoticeable manner. Connection of a client is performed using optical and copper lines, sometimes using wireless technologies. When connecting through FOL, the transmission capacity of Internet access may reach 1 Gb/s.

Major advantages:

- Stability, reliability and high quality of communications based on the network of high speed ground data transmission channels;
- Qualified technical support;
- Competitive tariffs without recording traffic intensity (Unlimited).

Corporate networks

UTeL.KZ Company organizes the protected corporate networks in the territory of the RK or one city based on IP/MPLS technologies which combine with high level of safety and service quality with maximum flexibility and scalability. Cooperation with such leading communications service providers as Kazakhtelecom JSC and Transtelecom JSC allows rendering the services of data transmission in majority of the RK populated points. Connection of a client is made using optical and copper lines.

Taken as a whole with the services of private corporate networks arrangement, UTeL.KZ supplies the required equipment, if needed, performs designing and installation of the local office networks of a client.

Major advantages:

- Quality and reliability based on the network of high speed ground data transmission channels, reservation of data transmission channels through the entire network;
- Support and management by different service classes (QoS), diversified traffic (voice, data, video) integration without service quality losses;
- Protection against unauthorized access.

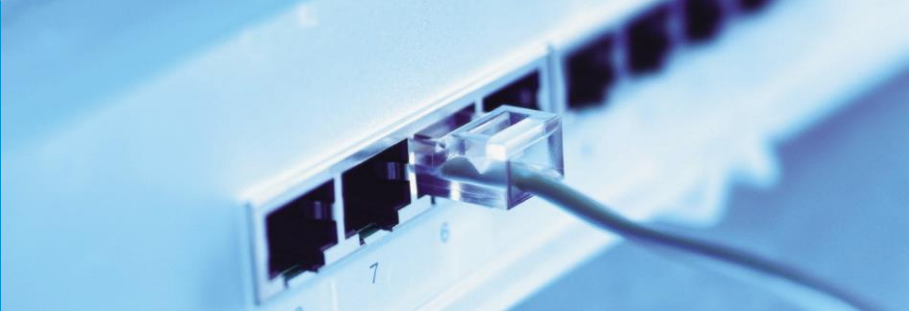

SCS designing and installation

UTeL.KZ performs the works related to installation of computer and telephone networks in a client's building.

UTeL.KZ creates the projects of networks for both small and medium size offices and for large enterprises. All required tasks to be solved as well as a client's capabilities are taken into consideration when designing the networks in order to select and create the most optimum project. To satisfy a client completely, we help to choose the required equipment, consult and perform qualified installation.

In addition to compliance with the basic industrial standards and support of the network protocols, SCS system should provide for high-quality network services and telecommunications services. The required level of network's operating capacity is built up at the stage of designing, development of network topology with selection of cable channels length. In the course of future scheme draughtsmanship, all groups of network and telecommunications equipment and engineering subsystems are considered.

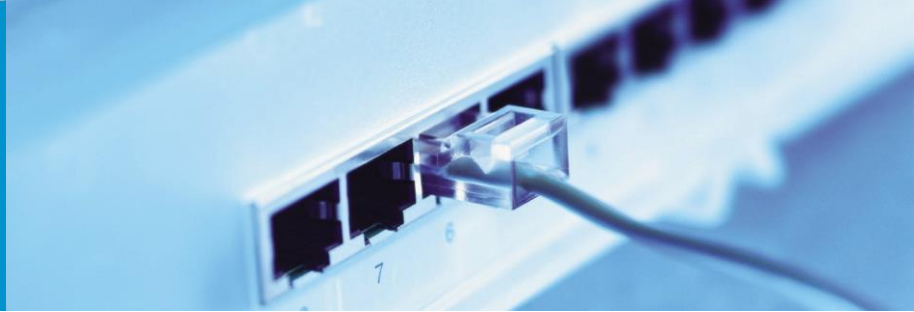

Service of business-centers

Currently the communication is an integral part of business life. Therefore, high level of real estate units' provision with advanced telecommunications infrastructure strengthens attractiveness thereof as viewed by the potential lessees.

UTeL.KZ organizes connection and renders a complex of modern telecommunications services for business-centers of Almaty and Astana. Each client is offered individual technological and price solution - depending on functional designation and scale of building. High reliability and quality of communications are provided by fiber optic lines. UTeL.KZ supplies and installs telecommunications equipment made by the leading global producers. All works, including designing and installation of the net-works inside a building are delivered 'ready-to-operate' and connection of new lessees is performed within three days.

Experience of work with large business-centers in the RK makes it possible for UTeL.KZ team to use the skills gained to provide high-level service. For the purposes of the quickest possible response to a client's needs, an engineer specially assigned out of UTeL.KZ staff for this purpose deals with the issues of technical service of a client's infrastructure.

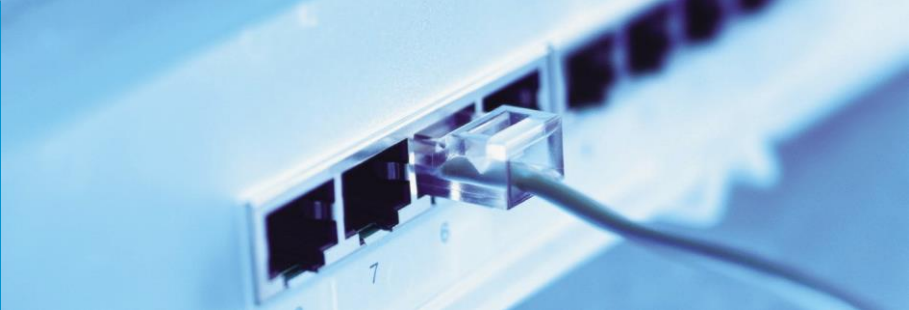

Supply of software and hardware

UTeL.KZ is a partner of leading software, IT-equipment and integrated solutions vendors in the field of information security.

- **Software:** Microsoft, Vmware, Veeam, Posgress, Mdaemon, Corel, ABBYY, Citrix and others;
- **Antivirus solutions:** Kaspersky Lab, Eset Nod 32, Dr.Web, Acronis, McAfee, Triend Micro, AVAST, Symantec and others;
- **Cloud - solutions** from leading manufacturers;
- **Server and network equipment:** HP, DELL, Cisco, IBM, APC, Juniper, Zyxel, Fujitsu and others;
- **Office equipment:** Canon, Xerox, Samsung, HP;
- Workstations, monoblocks, hardware, original consumables.

System integration, IT services

- Design, supply and implementation of communication systems, information security
- Professional selection and adjustment of the equipment
- IT outsourcing, maintenance and disposal of equipment
- Audit of IT and information security
